1). A company wants to calculate the **net salary of an employee**.

Rules:

- Basic salary is given by the user.
- If salary is **less than 30,000**, bonus = **10% of salary**.
- If salary is **30,000 or more**, bonus = **15% of salary**.
- Net salary = **salary + bonus**.

Write a Python program to calculate the **net salary**.

Code:

```
salary = float(input("Enter employee basic salary: "))
if salary < 30000:
   bonus = salary * 0.10
else:
   bonus = salary * 0.15
net_salary = salary + bonus
print("Bonus:", bonus)
print("Net Salary:", net_salary)
```

Example input:

25000

Output:

Bonus: 2500

Net Salary: 27500

2). Bus Ticket Price Calculation

Problem:
Calculate ticket price based on age.

Rules

- Age < 12 → ₹50
- Age 12–60 → ₹100
- Age > 60 → ₹70

Code:

```
age = int(input("Enter age: "))

if age < 12:

    price = 50

elif age <= 60:

    price = 100

else:

    price = 70

print("Ticket price:", price)
```

3). Voting Eligibility

Problem:
Check whether a person is eligible to vote.

Code

```
age = int(input("Enter age: "))

if age >= 18:

    print("Eligible to vote")

else:

    print("Not eligible to vote")
```
